The new filter half mask air star F 2.0

Kornwestheim, Germany, September 2024

SATA GmbH & Co. KG
PO. Box 1828
70799 Kornwestheim

Breathing protection made easy – and stylish

Breathing protection is an issue that cannot be taken seriously enough. When working in the paint booth for long periods of time, it is (hopefully) the consensus and good practice to wear the appropriate and required breathing protection system. However, masks should also be used for smaller painting and sanding jobs outside the booth.

This is why SATA presents the air star F 2.0 half mask with filter. Designed to make wearing a mask as comfortable as possible. The new masks comes with numerous new features:

The filters of the air star F 2.0 are considerably flatter, and they also sit lower and further back than on previous models. The result is a much wider field of vision.

Weighing just 325 grams, the air star F 2.0 is significantly lighter than its predecessor model. According to the manufacturer, it has also been further optimised in terms of comfort. This ensures a comfortable fit and fatigue-free working. Once adjusted, the spider strap head fixation retains its setting and always fits straight away without the need for readjustment.

The new model even stands out when it comes to changing filters: With its practical click system, the air star F 2.0 makes filter replacement a breeze. Appearance also plays a role in whether a mask is worn or not: In black with red accents, the air star F 2.0 looks really smart.

Expected to be available from November 2024
